Clean Versions of Amended Claims

	1. A method of sanitizing the udders and teats of dairy cows, comprising washing
6/	or dipping said udders and teats with an aqueous solution an active ingredient of which is a hop
	compound in a concentration effective to kill pathogens on said udders and teats without causing
	trauma to said cows.
,	
	7. A method as claimed in claim 6, in which said hop compound is
ρ_{λ}	tetrahydroisohumulone.
	9. An aqueous solution or suspension for sanitizing the pathogen-carrying udders
63	and teats of dairy cows by washing or dipping said udders and teats in said solution, comprising a
	hop compound in a concentration effective to kill said pathogens without causing trauma to said
	cows.
